ANIMAL	
SMOOTHBORE'S SAVVY TOTEM CANINE / VIZSLA	Reg. #: SH87462500 Microchip: 467F3A751F Tattoo:
Date of Birth: 4/21/2011 Sex: F Weight: 35 lbs. Age: 7 mo.	

RESULTS			
LEFT	Distraction Index (DI)	0.35	DI is greater than 0.30 with no radiographic evidence of DJD. There is an increasing risk of developing DJD as the DI increases; low risk when DI is close to 0.30, high risk when DI is close to 0.70 or above.
	Degenerative Joint Disease (DJD)	None	
	Cavitation	No	
	Other Findings	Not Applicable	
RIGHT	Distraction Index (DI)	0.22	DI is less than or equal to 0.30, with no radiographic evidence of DJD.
	Degenerative Joint Disease (DJD)	None	
	Cavitation	No	
	Other Findings	Not Applicable	

Please note that the PennHIP DI is a measure of hip laxity; it does not allow for a "passing" or "failing" hip score.

PennHIP does not make specific breeding recommendations. Selection of sire and dam for mating is the decision of the breeder.

NOTE: As a minimum breeding criterion, we propose that breeding stock be selected from the population of animals having hip laxity in the tighter half of the breed (to the left of the median mark on the graph). Higher selection pressure equates to more rapid expected genetic change per generation.

By implementing selection based on passive hip laxity, we expect the breed average DI over the years to move toward tighter hip configurations, reducing lower hip dysplasia susceptibility. The PennHIP database permits scientific adjustment of criteria to reflect these shifts; the average laxity and range of laxity for a particular breed will change over time.

PennHIP / Veterinary School of the University of Pennsylvania / 3800 Spruce Street / Philadelphia, PA 19104
